★ WHY THIS PROGRAM MATTERS

Nepal's Climate Imperative

Nepal is among the world's most climate-vulnerable nations, yet its financial sector is at an early stage of integrating climate risk into credit, investment and portfolio decisions. As regulatory expectations rise and green capital markets grow, finance professionals must be equipped to lead — not just respond.

This program builds the foundational knowledge needed to do exactly that, grounded in both global best practice and Nepal's unique development context. By completing this course, participants will be ready to identify climate-related risks and opportunities, apply sustainability frameworks, and contribute to a more resilient financial system.

📁 PROGRAM AT A GLANCE

Overview

- Foundational understanding of climate change, sustainability, and their growing relevance in the financial sector
- Explores global frameworks, SDGs and international climate finance mechanisms that shape policy and investment
- Covers sustainable, climate and green finance definitions; global and Nepal-specific taxonomies; capital market instruments
- Highlights opportunities for local FIs to access climate finance and align with national priorities
- Includes DFIs and blended finance

Two Comprehensive Modules

MODULE 01

Introduction to Climate Finance

- What is Climate Change? Key science & drivers
- Sustainability & Sustainable Development concepts
- Intersection of Sustainability and Finance
- Evolution of Climate Finance globally
- International Governance for Climate Change
- Key global developments & milestones
